

The XM radio has greatly improved my weather and traffic information on a daily basis. Enduring all the advertising and other meaningless verbage while trying to cross Detroit and other larger Cities is very frustrating. Many times, I have encountered the traffic problem before ever getting the information on AM or FM! With XM it's just push one (1) button & listen to the weather & traffic for those large Metro. areas. This new form of real time information is GREAT & to stop it would be a gross disservice and limits safety to many subscribers of XM Radio. Additional, the weather information is accessible right away..When it's needed, not after many minutes of listening to some.... ten minutes (10) of time consuming "weather history" or other time stealing data. Best Regards Jack T. Hubbard
